

encyclopedia of human computer pdf

A computer is a machine (mostly electronic) that is able to take information (), and process it to make new information (). Calculating machines are old in the history of technology. Early examples are the astrolabe and the abacus. Today a computer is a programmable machine. The two principal characteristics of a computer are: It responds to a specific instruction set in a well-defined manner ...

Computer - Simple English Wikipedia, the free encyclopedia

The human-computer interface can be described as the point of communication between the human user and the computer. The flow of information between the human and computer is defined as the loop of interaction. The loop of interaction has several aspects to it, including:

The Encyclopedia of World Problems and Human Potential was the result of an ambitious effort to collect and present information on the problems with which humanity perceives itself to be confronted. It aims to clarify the challenges such problems represent to concepts, values and development strategies. The Encyclopedia encourages the discovery of a new conceptual dynamic for understanding and ...

This article documents the progress of significant human-computer chess matches.. Chess computers were first able to beat strong chess players in the late 1980s. Their most famous success was the victory of Deep Blue over then World Chess Champion Garry Kasparov in 1997, but there was some controversy over whether the match conditions favored the computer.
