Figure 1.1 illustrates the problem of matching a reliability or risk prediction to the eventual field performance. In practice, prediction addresses the component-based "design reliability"™, and it is necessary to take account of the additional factors when assessing the integrity of a system.

The risk and reliability assessment of the Exploration Systems Architecture Study (ESAS) was an integral element of the architectural design process. Unlike traditional turnkey assessments used to evaluate results independently derived by designers, the risk assessment approach used in this study allowed designers to examine risk trades concurrent with the design process.
